Dear Sir / Madam,

**SUB: Submission of newspaper clippings for the Unaudited Financial Results for the First Quarter ended 30<sup>th</sup> June, 2022**

Pursuant to the Regulation 47 of the SEBI (LODR) Regulations, 2015, the Company has published the Unaudited Financial Results for the first quarter ended 30<sup>th</sup> June 2022, in the following Newspapers on 11<sup>th</sup> August 2022.

1. Trinity Mirror (English)
2. Makkalkural (Tamil)

Copy of newspaper clippings in this connection is attached.

This is for your information and records.

Thanking you,  
Yours faithfully,

**For INDOWIND ENERGY LIMITED**

**N K Hari Babu**  
**Chief Financial Officer**

Branch Office, **Encl: a:a**

## New study on early diagnosis of cancer, brain disorders 'Moms' problems linked to adolescent attachment issues

Researchers at Queen's University Belfast have revealed how the pathway of an identified protein could lead to early diagnosis and targeted treatment for several cancers and brain disorders.

The team of researchers discovered how the journey or molecular pathway of an identified protein is both essential for brain development and how an alteration to its pathway could result in the spread of cancer.

The study has revealed the molecular mechanisms of a timely and spatially controlled movement of cells that is essential for the migration of newborn neurons during brain development and can also cause the spread of cancer, or cancer metastasis throughout the body.

It is expected this discovery will have a huge impact on the fundamental understanding of cancer metastasis and brain development and could lead to earlier diagnosis and better treatments, the research authors said.

During brain development, neural stem cells give birth to neurons, which then migrate to specific locations within the brain where they form connections and mature in function. A defect in this process is known to cause several

neurodevelopmental disorders. A better understanding of these events is key to decoding fundamental mechanisms of brain development and revealing novel diagnostics and therapeutic avenues for such disorders.

Cancer is a leading cause of death worldwide, accounting for nearly 10 million deaths in 2020, or nearly one in six deaths. The majority of tumours are solid, except for a few cancer types of blood origin. Often by the time solid tumours are detected, some cells from the primary tumour have begun to spread to other parts of the body by a process called metastasis, giving rise to secondary tumours whose cells are often resistant to chemotherapy. While surgical removal, chemotherapy and other types of anti-tumour therapy can target the primary tumour, metastasis makes the outcome unpredictable and can lead to more aggressive

relapse. It is crucial to understand the features of cancer in order to tackle it.

Epithelial to Mesenchymal Transition (EMT) is a particular molecular pathway that enables cell migration and is vital for early development processes including brain development as well as for wound healing later in life but is also used by cancer cells for metastasis. The research team identified a particular protein, ZNF827, which they identified as a critical regulator of EMT. The study shows how the journey or molecular pathway of the protein is both employed for migration of newborn neurons to proper places during brain development and also exploited by tumour cells to gain migration potential and thereby cause metastasis to different organs.

Lead Author, Dr Vijay Tiwari from the Wellcome-Wolfson Institute for Experimental

Medicine at Queen's University, said: "Our study not only sheds light on the development of one of the most important organs in our body -- the brain -- but it also shows how the same protein that is key for brain development can also be the cause or target for the spread of cancer in the body, a real Jekyll and Hyde protein.

"The process for migrating newborn neurons to proper places during brain development is the same process exploited by tumour cells to gain migration potential, causing the movement of cancer throughout the body, or cancer metastasis.

"By identifying key regulators of these pathways, we open new opportunities for a therapeutic intervention against cancer and a better understanding of neurodevelopmental disorders involving defects in brain development."

It should come as no great surprise that mothers have profound influence on their children. But what about mothers who have their own personality disorder symptoms, such as problems getting along with others? New research finds, for the first time, that maternal personality disorder symptoms impact their adolescent children who subsequently show a higher likelihood of insecure attachment.

Secure attachment is the goal - it is when children feel comforted by the presence of their parent or caregiver and is a significant factor for socio-emotional development and mental health in youth. Previous research has shown that insecure attachment is associated with depression and anxiety, delinquency and substance use problems, and poorer social competence in children.

Why mothers struggle in their own interpersonal relationships, the passing on of secure attachment

and healthy relationship functioning to adolescent offspring seem to be impeded," reports Carla Sharp, professor of psychology and director of the University of Houston Developmental Psychopathology Lab, in the journal *Borderline Personality Disorder and Emotion Dysregulation*. "Maternal interpersonal problems were associated with higher levels of insecure attachment in adolescent offspring such that adolescents would either dismiss the need for attachment with their moms or show angry preoccupation with their relationship with their moms."

While mothers' problems have long been shown to be associated with maladaptive adult attachment in close or romantic relationships, this is the first study to examine relationships

with offspring attachment. The research could inform interventions to prevent or reduce youth psychopathology and other negative outcomes.

Parent-child attachment security continues to play an important role through adolescence, which is thought to be the second most critical developmental window after infancy and early childhood.

Sharp and team interviewed 351 psychiatric inpatient adolescents (average age of 15 and 64 per cent female) and their biological mothers. Participants were asked about distressing interpersonal behaviors that they find "hard to do" (e.g., "It is hard for me to feel close to other people" or "do too much" e.g., "I try to please other people too much"). Children were assessed on their ability to describe their attachment experiences coherently and collaboratively and to reflect on these experiences and their impact on them.

The team also examined whether mothers' recalled bonding with their own mothers to explain the relationship with their children. It did.

"The way that parents recalled their experiences with their caregivers is likely impacted by their own interpersonal functioning and may impact the relationship that they build with their children," said Sophie Kerr, first author of the article and graduate student of Sharp's.

Those results will drive researchers to further examine mechanisms of intergenerational risk to tailor interventions aimed to improve parent-child relations and attachment.

"Findings highlight the mediating role of the mothers' recalled experiences with caregivers in the impact of their interpersonal problems on adolescents, suggesting interventions that enhance interpersonal function such as mentalisation-based interventions may be helpful for mothers with interpersonal problems and personality pathology," said Sharp.

### PUBLIC NOTICE

My Clients Mr. Marjappa, S/o. V. Kanappa and his Wife Mrs. Saraswathy residing at Door No. 452/46, 2nd Street, Pochraj Nagar are the Absolute Owners of the below mentioned Schedule Property. The Vendor Mr. A. Deendayalan, S/o. T.P. Adinarayana was sold the Property to my Clients through the registered Document No. 2871/2010 dated on 08.09.2010. The Vendor's original Document No. 2442/2010 dated on 24.02.2010 was missed. And for that the Vendor obtained the non-traceable Certificate from Police Station of Old Washermanpet dated on 11.07.2011. Subsequently Rectification deed as dated on 07.02.2012 Document No. 539/2012 was registered to my clients from the Vendor. In respect of this Property if any interested person or Party having and claim or objection in whatsoever manner may inform me within 10 days from the date of Publication of this Notice. In case if there is no claim or objection from any persons or parties within ten days, it will presume that no persons or parties have any right over the said property.

By this Notice any person(s), other than the owners having any right / title / claim / interest in / to the said property are called upon to lodge their claim along with documentary proof thereof, with me within Ten (10) days from the date of Publication of the said Notice. This is for Public Information.

**SCHEDULE**

All the piece and parcel of Lands measuring 76.23 Sq.mtr, 820.23 Sq.ft extended land in No. 10, Chennamburam Zone, Thondarajpet Village, Block No.30 and R.S. No.1835/1, bound on North by: Land No.88 and 89, South by: Street, East by: Land No.83 and West by: Land 85 and situated within the Registration District of North Chennai and Sub - Registration District of Royapuram, Chennai.
